Contributing Authors

Andrea Bosch works in Washington, D.C., for Education Development Center, a nongovernmental organization, and specializes in the use of technology for gender, early childhood development, and primary education, with an emphasis on interactive radio instruction.

Xiao Caiwei is Director, International Department, China National Committee on Aging.

Sam Carlson, M.P.A., is Executive Director of World Links, whose mission is to improve educational outcomes, economic opportunities, and global understanding for youth in developing countries, through the use of ICTs.

Claudio de Moura Castro, Ph.D., is President of the Consultative Board of the Faculdade Pitagoras in Brazil. From 1995 to 2000, he was Education Advisor at the Inter-American Development Bank. He also worked at the International Labor Organization, the World Bank, and the Brazilian Ministry of Education.

Michael Corry, Ph.D., is an Assistant Professor and Director of the Educational Technology Leadership program at The George Washington University. His research interests include distance learning theory and policy, asynchronous learning, technology for K-12 and higher education, and human-computer interaction.

Gajaraj Dhanarajan, Ph.D., is President and CEO of The Commonwealth of Learning. He is a Malaysian citizen and has been involved in distance education and open learning for more than 25 years.

Alexandra Draxler is Senior Program Specialist at the International Institute for Educational Planning (UNESCO) and former Secretary to the International Commission on Education for the Twenty-first Century.

Anlyda Melara de Fanconi is Minister, Honduran Council for Science and Technology.

Mary Fontaine is Director of Information Synthesis and Dissemination, LearnLink, Academy for Educational Development, where she monitors results from 15 ICT-based activities globally. She has had 20 years of programming experience in major sectors in Asia, Africa, and the Middle East.

Cheick Tidiane Gadio, Ph.D., is Minister of Foreign Affairs of the Republic of Senegal. He has extensive experience in the use of ICTs for development, and holds a doctorate in communications from Ohio State University.

Edmond Gaible, Ph.D., is Executive Director of the Educational Object Economy Foundation (www.eoe.org), a nonprofit online learning community. He has provided consultation to the World Bank, UNDP, UNICEF, and many Ministries of Education and regional NGOs.

Norma García, M.A., is a consultant for the Regional Policy Dialogue Education Network at IDB.

Wadi D. Haddad, Ph.D., is President of Knowledge Enterprise, Inc., Editor of *TechKnowLogia*, and former Director and Deputy Corporate Secretary at the World Bank.

Gudmund Hernes, Ph.D., is Director of the International Institute for Educational Planning at UNESCO. He served as Undersecretary of Planning; Minister of Education, Research and Ecclesiastic Affairs; and Minister of Health in his native country, Norway.

Heather E. Hudson, Ph.D., is Professor and Director of the Telecommunications Management and Policy Program, University of San Francisco. She has written extensively on telecommunications and development, and has contributed to related projects in more than 40 countries.

●
Gregg Jackson, Ph.D., is Professor and Coordinator of the Education Policy Program at The George Washington University.

John Y. Jones is User Services Coordinator, National Clearinghouse for Comprehensive School Reform at The George Washington University.

Sonia Jurich, M.D., is Senior Associate at Knowledge Enterprise, Research Associate at RMC Research Corporation, and former professor of psychiatry in her native Brazil.

Sera Kariuki, Ph.D., works for Education Development Center, a U.S.-based nongovernmental organization, is based in Lusaka, Zambia, and specializes in IRI for children at high risk.

Kurt D. Moses, M.B.A., is Vice President, Academy for Educational Development.

Juan Carlos Navarro, Ph.D., is Acting Chief of the Education Unit in the Sustainable Development Department at IDB, where he has worked since 1997. Previously he was Coordinator of the Center for Public Policy at the Instituto de Estudios Superiores para la Administracion (IESA) in Caracas.

Cesar A. A. Nunes, Ph.D., is a researcher at the School of the Future of University São Paulo, SENAC's Faculty of Computer Science and Oort Tecnologia, and a consultant to the Brazilian Ministry of Education.

Rebecca Rhodes works in Washington, D.C., for Education Development Center, a nongovernmental organization, and specializes in the teacher training components of IRI programs, with a particular emphasis on West Africa.

Eric Rusten, Ph.D., is Deputy Director for dot-ORG and former Director of the U.S./Brazil Learning Technologies Network (both USAID-funded initiatives) at the Academy for Educational Development.

Robert Savukinas is a doctoral student in the Higher Education Administration program at The George Washington University.

Carlos Velásquez is a computer scientist with the Honduran Council for Science and Technology.

Aimee Verdisco, Ph.D., is an education specialist at the Inter-American Development Bank.

Raymond L. Vigil, Ph.D., is former Chief Operating Officer for Learning at Lucent Technologies.

Michelle Ward-Brent is Girls' Education Adviser to the United States Agency for International Development (USAID), Cairo Office.

Ryan Watkins, Ph.D., is an Assistant Professor of Educational Technology Leadership at The George Washington University. He has written extensively on distance education, return-on-investment analysis, evaluation, needs assessment, and strategic planning.

Laurence Wolff, Ed.D., has been a consultant with the Education Unit of the Sustainable Development Department of the Inter-American Development Bank (IDB) since 1997. Previously he worked at the World Bank for 22 years.

Preface

The right to education means that educational opportunity must be both equal and universal. Throughout its existence, UNESCO has sought to expand the reach of educational services and improve their quality. Its commitment to innovation, notably through the use of technologies, is equally long-standing. Since the 1960s, UNESCO has supported a variety of specific projects and conducted studies on a range of topics, including use of technologies for primary education in developing countries, expansion of higher education at a distance, and use of technologies in classroom instruction at all levels.

Educational progress in many developing countries faces a severe double bind. While all now accept the notion of the right to education and the expansion of demand at all levels this right implies, widespread economic stagnation or decline prevents action. These opposing trends put intolerable pressures on many countries' educational systems. Traditional expansion of education systems in many parts of the world will be impossible, so new resources and methods must be found. Impressive advances in technology over the past few years provide new hope that technological solutions, intelligently applied, can allow greater access, higher quality, and lower cost per learner. To achieve massive improvements through technologies will require learning from past mistakes and careful analysis of how to innovate broadly and durably.

UNESCO's current program has a strong emphasis on the use of technologies in and for education. This monograph is intended to help educational decision makers survey the technological landscape and its relevance to educational reform. This monograph is firmly rooted in a vision of education that begins with the learner and attempts to understand how technological tools can better contribute to educational goals. It looks at how technology can promote improvements in reach and delivery, content, learning outcomes, management of systems, teaching, and pertinence. In short, it is a contribution to global reflection on how to make learning throughout life a reality.

John Daniel
Assistant Director-General for Education
United Nations Educational, Scientific and Cultural Organization (UNESCO)

Foreword

For 40 years, the Academy for Educational Development (AED) has devoted itself to fostering worldwide development in education, health, environment, family planning, and the economy, often introducing technology as a means to achieve development goals.

Today the demand for educational technology is high, and when technology is used thoughtfully and is learner centered, the results are gratifying. Again and again, we have witnessed the power of technology to enable people to learn and to interact, even in the most remote areas of the developing world. Through increased outreach we are helping to build the IT capacity of underserved populations such as people in rural areas, women, those with disabilities, and speakers of minority languages.

Lower costs and more flexible, adaptable, and user-friendly hardware are making this possible. So, too, is a new generation of teachers, planners, and administrators who understand the value and utility of the technologies. In its first international ed-tech project—evaluation of El Salvador’s educational TV program—AED witnessed the impact that such thinkers can have on an educational system. In El Salvador a forward-looking minister of education viewed cutting-edge technology not only as an opportunity to deliver innovative programs to school children—the original purpose of the project being evaluated—but also as a means to achieve broader reform of a complex educational system. More than 25 years ago, he demonstrated technology’s potential for educational change.

Long ago we learned that technology is not the answer unless it reflects learners’ needs and suits their environment. Technologists then become their partners, and the new technologies help learners learn, conduct business, advocate for causes, receive information, and participate in the marketplace. AED is one such partner that provides assistance in planning, training, assessment, and hands-on support to ministries, communities, schools, and international donor agencies to help spread the effective use and application of the technologies.

It is imperative for decision makers and practitioners to share their experiences with educational technologies. Thus this book is an attempt to organize what is known in terms of research, thinking, and experience. It captures much of the progress in the field. It also identifies the challenges we still face.

AED, an independent, private, nonprofit organization, is delighted to co-publish this important book with UNESCO. Together we hope to further the dialogue about the promise of the new technologies for learning and development.

Stephen F. Moseley
President and CEO
Academy for Educational Development
